

ASHISH NAMDEO

Software Engineer | Backend · Full-Stack · AI | Java · Python · JavaScript
747-244-2908 • ashish.namdeo.1697@gmail.com • https://linkedin.com/in/ashishnamdeo16 • California, USA | Open to Relocation

Summary

Software Engineer with 4+ years of experience specializing in enterprise backend systems and modern web applications. Holds a degree from California State University, Northridge and has strong knowledge of **Java**, **JavaScript**, **Python**, data structures, algorithms, **Git**, **low-level design**, and distributed systems. Has expertise in developing scalable and high-performance systems that ensure reliable, secure, and available access for customers

Experience

Marketeq Digital Miami, FL
Software Engineer 08/2025 - 11/2025

- Implemented resilience patterns (retries with back off, circuit breakers) that improved backend service reliability and prevented cascading failures under load
- Reduced API response times by 35% by introducing Redis caching strategies that cut redundant database load on hot read paths
- Built prompt-logging and versioning tooling to track model input/output pairs across deployments, enabling reproducible debugging of feature regressions
- Integrated streaming LLM responses into FastAPI endpoints over Server-Sent Events (SSE), reducing perceived time-to-first-token by ~45% for real-time AI features

LogiNext Solutions Mumbai, India
Software Engineer 10/2021 - 07/2024

- Resolved a critical production failure across UPS and McDonald's order pipelines, restoring fulfillment for 5,000+ impacted customers within SLA
- Launched a serverless AWS Lambda microservice that scaled order-processing throughput by 50% with zero downtime
- Led the AngularJS to ReactJS migration of core modules, driving an 80% improvement in application responsiveness
- Engineered a geospatial-aware auto-assignment engine optimizing 10K+ daily trip assignments at sub-200ms p99 latency
- Shipped a configurable real-time form-schema service that cut enterprise client onboarding time by 40% for 100K+ daily active users
- Designed a Kafka event-streaming pipeline processing 500K+ daily orders, forming the data foundation for downstream route optimization

JalaRam Infrastructure Raipur, India
Software Developer 09/2020 - 09/2021

- Built high-throughput Node.js/Express REST APIs over MongoDB, reducing response latency by 25%
- Refactored MongoDB query flows and indexing strategies, accelerating data-fetch operations by 35%
- Architected real-time bidirectional communication via WebSockets and Socket.IO for live inventory and material tracking across project sites
- Built reusable React.js components with Redux Toolkit state management, scaling the platform to 2000+ active users with zero rendering inconsistencies

Skills

Programming Languages: Java · Python · JavaScript · TypeScript · SQL
AI / ML: LLM Integration · RAG · Vector Databases · LangChain · OpenAI API · Embeddings · Semantic Search · Prompt Engineering · Cursor · Claude Code
Backend & Frameworks: Spring Boot · FastAPI · Node.js · Express.js · REST APIs · GraphQL · Microservices · Apache Kafka · Hibernate/JPA
Frontend: React · Next.js · Redux Toolkit · AngularJS · HTML · CSS · Tailwind CSS
Databases: PostgreSQL · MySQL · MongoDB · Redis
Cloud & Tools: Docker · AWS · Kubernetes · Jenkins · CI/CD · Git · GitHub · Linux
Engineering Concepts: System Design · Distributed Systems · Data Structures · Algorithms · Load Balancing · Scalability · Fault Tolerance · SDLC · Debugging

Education

California State University, Northridge Northridge, USA
Master of Science in Computer Engineering (GPA: 3.7/4.0) 08/2024 - 05/2026

Projects

Pitch Pilot AI - Real-time AI pitch-coaching web app 04/2026
<https://pitch-ai-eosin.vercel.app/>

- Built a full-stack AI app streaming speech-to-text over WebSockets with sub-second latency, integrating GPT-4o for live structured feedback on pacing, filler words
- Implemented investor-simulation personas and a session analytics dashboard with exportable reports
- Documented architecture and design tradeoffs in the README; deployed as a live demo

AutoFix Agent – Autonomous code-repair agent · Python, Anthropic API, Docker 02/2026
<https://github.com/ashishnamdeo16/agent-fix>

- Built an autonomous agent that ingests a GitHub issue, plans a fix, writes code, runs the test suite in a sandboxed Docker environment, reads results, and iterates until tests pass or exits gracefully after N attempts
- Engineered safe execution of untrusted LLM-generated code in isolated Docker containers with resource limits and timeouts, preventing host-system risk
- Designed an evaluation suite of 20+ test cases measuring fix accuracy and success rate, with full run logging (agent steps, tool calls, token cost) for observability

Key Achievements

 Q1 2023 Cheetah Award Delivered features with 30% faster turnaround time, earning Q1 2023 Cheetah Award	 Customer Issue Resolution Resolved over 100 critical customer issues, enhancing client satisfaction and retention	 Scaled to 100K+ Daily Users Shipped a real-time form-schema service at LogiNext serving 100K+ daily active users across enterprise clients
